

SUMMARY

AI engineering graduate (B.E. AI & ML, SPPU 2026) building wearable and voice AI systems end to end: ESP32-S3 firmware, FastAPI backends, React frontends, and native Android clients. Open-source contributor in the Omi wearable ecosystem.

TECHNICAL SKILLS

Languages	: Python, TypeScript/JavaScript, Kotlin, C/C++
Frameworks	: React, Node.js, FastAPI, Android Jetpack Compose
AI/ML	: LLM tool calling (MCP), RAG, multi-agent orchestration, TensorFlow, PyTorch, ML Kit
Dev Tools	: Git/GitHub, REST APIs, Vitest, Supabase/pgvector, Kubernetes Helm

EXPERIENCE

Aura — Founder <i>Wearable AI Pendant: ESP32-S3 Firmware, FastAPI Backend, Open Source</i>	Jun 2025 – Present Pune, India
- Designed and 3D-printed custom enclosures packaging a Sseed XIAO ESP32-S3 Sense, ribbon camera, LiPo battery, and mic into a wearable AI pendant. Wrote FreeRTOS event loops for I2S DMA audio capture at 16 kHz with Opus on-device compression and OTA firmware updates - Integrated the device with the Omi Glass ecosystem via a FastAPI backend (memory, transcription, knowledge graph, and speaker identification routers) and self-hosted Deepgram Nova-3 ASR on Kubernetes Helm charts - Diagnosed an Electron WebGL GPU memory leak on Windows caused by CSS backdrop filters over a React Three Fiber canvas (Issue #8438, merged downstream in PR #8902) - Authored offline agglomerative hierarchical clustering (SciPy cosine linkage, 52 unit tests) fixing speaker drift in 3+ person meetings (PR #8919, adopted downstream in PR #12471)	
AI & ML Intern — AICTE via Google <i>Computer Vision: TensorFlow, ML Kit, Edge Deployment</i>	Oct 2024 – Dec 2024 Remote, India
- Built and evaluated on-device vision models with TensorFlow and Google ML Kit for mobile edge classification - Applied transfer learning and data augmentation to trade inference latency against accuracy under mobile memory limits	
Freelance — AI & Automation	Sep 2024 – Present
- Built custom AI agent workflows and automation scripts for student and developer projects - Earlier: Associate at Reliance (Jul–Oct 2024); Research Assistant at PES Modern College (Sep 2023–Mar 2024)	

EDUCATION

University of Pune (SPPU) <i>B.E. in Artificial Intelligence & Machine Learning</i>	Pune, India 2022 – Jun 2026
---	--------------------------------

PROJECTS

John — Android Voice Client	<i>Kotlin, Jetpack Compose, Python, LiveKit</i>	Source Code
Native Android Kotlin app (Jetpack Compose) connected to a Python LiveKit agent via WebRTC, with client-side Silero VAD for instant barge-in, semantic turn detection, and tool calling for calendar, tasks, and telephony		
LLM-Council — Multi-Model Consensus Engine	<i>Python, FastAPI, React, Vite</i>	Source Code
- Full-stack multi-LLM system querying OpenAI, Anthropic, Gemini, and Groq concurrently to cross-evaluate and synthesize answers via a 3-stage critique pipeline (Analyst, Skeptic, Synthesizer) - React/Vite frontend visualizes step-by-step model agreement with streaming output per provider
